PART I **THE EXAMINER'S EVALUATION OF THE APPLICATION**

SECTION A **RELEVANT ART CITED BY THE EXAMINER**

1. U. S. Patent No. 7,103,760 B1 to Billington et al. describes Embedded electronic device connectivity system.
2. U. S. Patent Publication No. 2005/0160150 A1 to Kao describes Apparatus and method for managing and transporting virtual disks over a network to networked stations.
3. U. S. Patent Publication No. 2005/0102377 A1 to King et al. describes Portable thin client for the enterprise workspace.

SECTION B **DISTINGUISHING FEATURES RECITED IN THE CLAIMS**

The following is an **Examiner's Statement of Reasons for Allowance** See
MPEP 1302.14

4. The primary reasons for allowance of claims 1-7 in the instant application is the combination with the inclusion of the following limitations: **detect the presence of a mass storage device locally coupled to a stateless client; and interface said mass storage device to an application executable on the server, wherein the server is configured to implement a multithreaded execution environment, wherein to interface the mass storage device to the application, the processor is further configured to execute the instructions to implement a device interface through which the mass storage device is visible to the application, and wherein the**

device interface is implemented by a corresponding device thread that is separately schedulable from other device threads for execution by the server wherein said mass storage device is accessible via said server by a user who interacts with said application via said stateless client

5. *The primary reasons for allowance of claims 8-14 in the instant application is the combination with the inclusion of the following limitations: detecting the presence of a mass storage device locally coupled to a stateless client; and interfacing said mass storage device to an application executable on a server, wherein the server is configured to implement a multithreaded execution environment, wherein the server is configured to implement a device interface through which the mass storage device is visible to the application, and wherein the device interface is implemented by a corresponding device thread that is separately schedulable from other device threads for execution by the server; wherein said mass storage device is accessible via said server by a user who interacts with said application via said stateless client*

6. *The primary reasons for allowance of claims 15-21 in the instant application is the combination with the inclusion of the following limitations: detecting the presence of a mass storage device locally coupled to a stateless client; and interface said mass storage device to an application executable on said server, wherein the server is configured to implement a multithreaded execution environment, and wherein to interface the mass storage device to the application, the program instructions, are executable by the server to implement a device interface through*

which the mass storage device is visible to the application, and wherein the device interface is implemented by a corresponding device thread that is separately schedulable from other device threads for execution by the server; wherein said mass storage device is accessible via said server by a user who interacts with said application via said stateless client

The prior art of record including the disclosures of Billington et al. (7,103,760 B1), Kao (2005/0160150 A1), and King et al. (2005/0102377 A1) neither anticipates nor renders obvious the above-recited combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays should be clearly labeled "Comments on Statement of Reasons for Allowance"
